

About the Program

Perform the tests in your own facility using ASTM D565, a detailed white mineral oil test method, and other related ASTM standards. Sponsored by ASTM Committee D02 on Petroleum Products, Liquid Fuels, and Lubricants.

Samples and Testing

Conducted three times annually, this program provides a different commercial sample (a representative of mineral oil), data report forms, and test instructions for each test cycle.

Why ASTM?

ASTM's Proficiency Testing Interlaboratory Crosscheck Programs provide labs with a statistical quality assurance (SQA) tool, enabling them to improve and maintain a high level of performance in the use of ASTM methods and to compare with other labs worldwide. Satisfy accreditation requirements and demonstrate your lab's testing capabilities.
