Statement regarding the Manufacture Date, Expiration Date and Shelf Life of Sonneborn Products Shipped from the Petrolia Plant

Products: USP/NF and Technical Grade White Oils, USP and Technical Grade Petrolatums, NF and Technical Grade Microcrystalline Waxes, Sulfonate, Cable Filler, Ink Oil, PD and Visconorust Products

The Petrolia Plant has established an Integrated Food and Quality Management system meeting ISO 9001:2015 and FSSC 22000 standards. These documented procedures identify and preserve the product during all stages of production and delivery, including storage and handling that prevent damage or deterioration of the product. Shipments from production batches at the Petrolia Plant are given unique and traceable batch identification numbers.

Products shipped from the Petrolia Plant may show a Manufacturing Date and an Expiration Date on the COA. However, the longevity of products shipped from the Petrolia Plant is primarily based on the storage and handling conditions used after the product leaves the control of the Petrolia operation. Limited laboratory testing indicates that all of our products will last more than three (3) years from the date of shipment, if they are stored in darkness, in the closed container with original seal and at temperatures of 15°C - 30°C (60°F- 86°F). It is up to the individual customer to evaluate the longevity of the product based on their particular storage and handling conditions.

Thank you for your interest in our products.

Sincerely,

Jing Humphreys
